

BUSINESS INTELLIGENCE

Make your Data work for you

Improve decision making

Realistic planning & forecasting

FSI Specific BI solutions

Complete Customization & Consulting services

Reporting solutions tied to single sources may meet tactical goals but they cannot measure up to the challenges that face an organization as a whole.

The right BI solution can help you make the most of your data enabling better decision making & performance tracking.

As the data available within organizations grow and the expectation from managers to make more pertinent decisions based on this data increases, information has become both the solution and the problem. Some of challenges often faced by companies and managers are:

- How well are you able to track the performance of your business, across functions, product and service lines, and geographies, how to spot variances in a timely manner, and what actions to take to meet goals?
- Do you have a single, accurate view of enterprise information across all functions and data sources? How efficient is your operational and financial reporting process? Are you delivering timely information to internal and external stakeholders?
- How much time and effort is your team spending trying to maintain consistency of business definitions across multiple systems and creating custom reports, when they could be working on higher value-add activities?
- Are you fully leveraging the investment and data generated by your ERP and CRM systems?

Business Intelligence applications are complete solutions that provide a single, integrated view of enterprise information, enabling greater insight and alignment across business functions. Coming from a background in which data mining and reporting is key to daily operations, business growth, customer profitability and compliance Synapsys has deep experience in this field and have transformed this expertise to a comprehensive BI service vertical.

WHY SYNAPSYS?

Synapsys has engaged in revamping financial management and reporting capabilities, risk management, and enabling compliance and statutory reporting requirements including Basel II compliance.

There are 3 arms to our BI solutions practice; Consulting, Applications and Data Management.
